

SEMESTER 1 IN-CLASS TEST 2022/2023

MODULE: EE458 - Control Systems Analysis

PROGRAMME(S):

ECE	BEng Electronic & Computer Engineering
ME	B.Eng. in Mechatronic Engineering
ECSAO	Study Abroad (Engineering & Computing)
ECSA	Study Abroad (Engineering & Computing)

YEAR OF STUDY: 4

EXAMINER(S):

Dr. Mingming Liu	(Internal)	(Ext:8492)
Dr. Josep R. Casas	(External)	External
Dr. Rudi Villing	(External)	External

TIME ALLOWED: 1 Hour

INSTRUCTIONS: Answer Question 1.
Marks will be lost if all necessary work is not clearly shown.
Marks will be lost if **Matlab** figures are not clearly labelled.
This exam is total of 25 marks.

PLEASE DO NOT TURN OVER THIS PAGE UNTIL YOU ARE INSTRUCTED TO DO SO.

The use of programmable or text storing calculators is expressly forbidden.
Please note that where a candidate answers more than the required number of questions, the examiner will mark all questions attempted and then select the highest scoring ones.

Requirements for this paper:

1. Log Tables

INSTRUCTIONS FOR COMPUTER-BASED WORK

IMPORTANT: PLEASE READ THIS SHEET CAREFULLY BEFORE COMMENCING THIS EXAM.

GENERAL:

- Set up your own directory (called your student exam number) in `c:\temp`.
- Save your work regularly. No credit is given for work that has been 'lost'.
- At the end of the exam, it is your responsibility to ensure that all your works including all m-files, script files, SIMULINK files, plot files and diary files (with extension `.txt`) have been saved successfully to the network drive `Q:\`.
- Please note that when you upload files to the network drive, you will see the files and folder names uploaded but cannot access (copy, view, edit and download) the files. However, you can upload a new folder/file during the exam.

SAVING PLOTS:

- The plot must be generated to your satisfaction in the Figure window. Do not minimize this window.
- Save your plot as type `*.fig` only. Other formats are not acceptable.
- **N.B.** Make sure that you save your plot to `c:\temp\...`. Make sure that you use a unique name for the plots.

DIARY FILES:

- It is recommended that you use a separate diary file for each part of a question.
- To open/start a diary file, at the MATLAB Command Prompt, type:

```
>> diary c:\temp\examnum\diary1.txt  
>> diary on
```
- To close a diary file, at the MATLAB Command Prompt, type: `>> diary off`

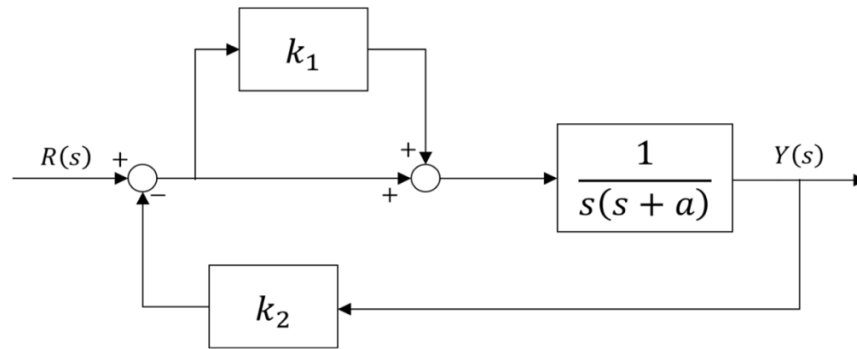

USEFUL MATLAB FUNCTIONS:

<code>abs</code>	<code>acos</code>	<code>angle</code>	<code>asin</code>	<code>atan</code>	<code>axis</code>
<code>bandwidth</code>	<code>bode</code>	<code>break</code>	<code>c2d</code>	<code>cd</code>	<code>clear</code>
<code>clf</code>	<code>close</code>	<code>conv</code>	<code>cos</code>	<code>det</code>	<code>eig</code>
<code>else</code>	<code>evalfr</code>	<code>exit</code>	<code>exp</code>	<code>feedback</code>	<code>figure</code>
<code>find</code>	<code>for</code>	<code>function</code>	<code>grid</code>	<code>help</code>	<code>if</code>
<code>imag</code>	<code>impulse</code>	<code>inv</code>	<code>isstable</code>	<code>label</code>	<code>length</code>
<code>log</code>	<code>log10</code>	<code>logspace</code>	<code>lsim</code>	<code>margin</code>	<code>max</code>
<code>mean</code>	<code>min</code>	<code>norm</code>	<code>nyquist</code>	<code>ones</code>	<code>open</code>
<code>ode45</code>	<code>pi</code>	<code>pinv</code>	<code>plot</code>	<code>pole</code>	<code>poly</code>
<code>print</code>	<code>pzmap</code>	<code>quit</code>	<code>rand</code>	<code>rank</code>	<code>real</code>
<code>residue</code>	<code>rlocfind</code>	<code>rlocus</code>	<code>roots</code>	<code>round</code>	<code>semilogx</code>
<code>series</code>	<code>sign</code>	<code>sim</code>	<code>sin</code>	<code>size</code>	<code>sqrt</code>
<code>ss</code>	<code>ssdata</code>	<code>step</code>	<code>subplot</code>	<code>sum</code>	<code>tan</code>
<code>text</code>	<code>tf</code>	<code>tf2ss</code>	<code>tfdata</code>	<code>title</code>	<code>while</code>
<code>who</code>	<code>xlabel</code>	<code>ylabel</code>	<code>zeros</code>	<code>zgrid</code>	<code>zpk</code>
<code>zpkdata</code>	<code>zoom</code>				

- **Please note:** the use of `solve()`, `stepinfo()`, `sisotool()`, `rltool()`, `sgrid()` or any of their related functions is not allowed as part of this assessment.

QUESTION 1 (COMPULSORY)**[TOTAL MARKS: 25]**

[See Appendix for applicable formulae]

Q1(a)**[15 Marks, (i)3, (ii)2, (iii)2, (iv)2, (v)2, (vi)2, (vii)2]**The block diagram for a control system is shown in **Figure Q1a**:**Figure Q1a**

- (i) Derive the transfer function $T(s) = \frac{Y(s)}{R(s)}$.
- (ii) Calculate the sensitivity value $S_{k_1}^T$.
- (iii) Let $G(s) = \frac{1}{s(s+a)}$. Calculate the sensitivity value S_α^T using the chain rule.
- (iv) Let $k_1 = 2$, $k_2 = 1$, $\alpha = 4$. Present the expression of $T(s)$ and determine the order and type of $T(s)$.
- (v) Without using the “isstable” function in **Matlab**, assess the stability of $T(s)$.
- (vi) Present the characteristic equation of $T(s)$.
- (vii) Calculate the steady-state error of the system given a unity step input.

Q1(b)**[6 Marks, (i)3, (ii)3]**Given the system set-up in **Q1(a)(iv)**:

- (i) Use **Simulink** to generate the output of the system for a unit step input. Set the simulation time as 10 seconds and step size as 0.01second. Save your model and output.
- (ii) Measure the steady-state error of the system based on the simulation output and comment on your results.

Q 1(c)**[4 Marks]**

Show that for a typical first order closed-loop system in the following format

$$T(s) = \frac{Y(s)}{R(s)} = \frac{\mu^n s + 1}{(\mu^{n-1} s + 1)}, \quad \mu > 0, n > 1$$

The steady-state error for any step input always equals 0.

[End of Question 1]

APPENDIX

Please note the use of *solve*, *stepinfo()*, *sisotool()*, *rltool()*, *sgrid()* or any of their related functions is not allowed as part of this assessment.

Selection of Laplace and Z-Transforms

$f(t)$	$F(s)$	$F(z),$
1	$\frac{1}{s}$	$\frac{T}{1 - z^{-1}}$
t	$\frac{1}{s^2}$	$\frac{Tz^{-1}}{(1 - z^{-1})^2}$
t^2	$\frac{2}{s^3}$	$\frac{T^2 z^{-1}(1 + z^{-1})}{(1 - z^{-1})^3}$
e^{-aT}	$\frac{1}{s + a}$	$\frac{1}{1 - e^{-aT} z^{-1}}$
te^{-aT}	$\frac{1}{(s + a)^2}$	$\frac{T e^{-aT} z^{-1}}{(1 - e^{-aT} z^{-1})^2}$

Product Rule:

$$y = uv \Rightarrow \frac{dy}{dx} = u \frac{dv}{dx} + v \frac{du}{dx}$$

Quotient Rule:

$$y = \frac{u}{v} \Rightarrow \frac{dy}{dx} = \frac{v \frac{du}{dx} - u \frac{dv}{dx}}{v^2}$$

Chain Rule:

$$y = u(v(x)) \Rightarrow \frac{dy}{dx} = \frac{du}{dv} \frac{dv}{dx}$$

[End of Appendices]
